Patch Authority Ultimate is a multi-faceted patch management application that includes a robust patch detection engine for automating the patching of software on virtual and physical desktop machines and servers, minimizing the amount of time required for IT administrators to secure the network.

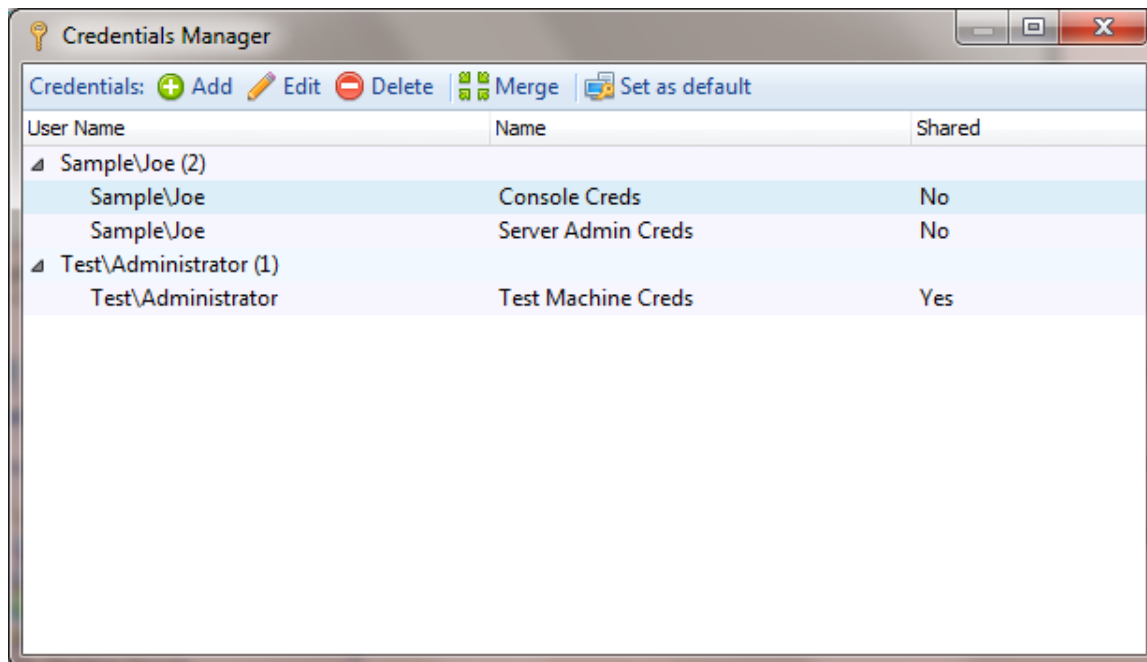

What's New in Patch Authority Ultimate 8.0

Multiple Administrator Support

The Patch Authority Ultimate console now supports multiple, independent administrators logging into the console simultaneously either physically, or via Terminal Services. Patch Authority Ultimate will notify you if the same account is trying to access the console from 2 locations simultaneously.

Credentials Manager

Credentials Manager provides a secure, single location for storing all credentials used in patching servers and desktops. All credentials are securely stored with industry standard encryption. Credentials entered by each admin using the Patch Authority Ultimate are assigned to that administrator, ensuring security across multiple administrators.

Other Enhancements

- Patch scan performance enhancements
- New operations home page

Summary

Patch Authority Ultimate 8.0 introduces a number of enhancements to improve manageability, security and reliability. A new console home page, concurrent admin support and the Credentials Manager makes Patch Authority Ultimate the best choice for organizations with multiple admins and distributed environments.

Patch Authority Ultimate is a total patch management solution that allows administrators to patch not only Microsoft operating systems and applications but also an extensive list of third party applications including Adobe Reader, Apple iTunes, Mozilla Firefox, QuickTime, RealPlayer, VMware, WinZip and many more. A complete list of applications supported by Patch Authority Ultimate can be found here:
