

Privilege Authority[®]

The Low-Cost Key to Windows Privilege Management

OVERVIEW

ALLOW USERS TO UPDATE THEIR DESKTOPS WITHOUT WEAKENING SECURITY

Securing your network is a top priority. Giving users administrator rights creates security risks but must be weighed against constant help desk calls for basic operations like updating Adobe® Reader®, Java, or simply changing the time zone.

Until now, privilege management solutions were typically as complex and expensive as robust desktop management tools.

SIMPLE AND EFFECTIVE PRIVILEGE MANAGEMENT FOR LESS

Privilege Authority Professional provides the core functions IT administrators need at a much lower price point than its competitors. By automating user privilege settings, Privilege Authority keeps users working and reduces help desk calls; this enables the help desk staff to focus on higher priority tasks, for exceptional resource and time savings.

REMOVE ADMINISTRATOR RIGHTS WITHOUT DISRUPTING USERS

The IT department is tasked with keeping the computing infrastructure running and secure. Users don't want to get stopped in their tracks while doing their jobs. Avoid irritating users – let them install legitimate apps with Privilege Authority, and help reduce unnecessary help desk calls. Privilege Authority enables a “Least Privileges” approach for your desktop computing environment.

Privilege Authority® Professional lets IT administrators grant selected privileges to users so they can update their own PCs, reducing help desk calls while maintaining a secure network. Elevate and manage user rights quickly and precisely with ScriptLogic's Validation Logic targeting technology. Use privilege elevation rules from the Privilege Authority Community, or create your own rules and allow administrator-level access to only the applications, Windows processes and ActiveX controls you deem safe

KEY BENEFITS

EFFECTIVE MANAGEMENT OF USER PRIVILEGES

Avoid the pain of managing each user and desktop individually. Elevate permissions automatically and only when needed by using privilege elevation rules.

QUICK DEPLOYMENT

Get immediate time-saving benefits by applying pre-defined privilege rules that are available in the Privilege Authority Community. Pre-defined rules meet the most common needs, such as elevating privileges for installing Adobe Reader, Java updates and printers.

SCALABLE

Privilege Authority Professional adapts as you need it – it offers domain administrators in organizations of all sizes the flexibility to delegate privilege management responsibilities to OU level admins.

APPLY FILTERS TO PRIVILEGE RULES

Rules can be targeted to clients based on multiple conditions that can be combined with AND/OR rules. Use attributes like username, computer name, user and computer groups, OU, OS, IP address range, registry key and file to target clients.

USE CASE SCENARIOS FOR KEY PRODUCT FEATURES

Core Privilege Management Functions

- Central management console
- View, select and deploy common or pre-defined rules attached to GPOs
- View, select and deploy custom rules attached to GPOs
- View and assign rules to specific clients, domains or OUs using Active Directory

Import rules from Privilege Authority Rules Exchange

- Apply rules developed by other Privilege Authority users (see examples below)
 - Add local printer
 - Run iTunes® installer as Administrator
 - Change time zone or date/time from taskbar
 - Change system date and time
 - Allow Java Runtime updater to run as Administrator
 - Allow Adobe Reader updater to run as Administrator

Create Custom Rules

- Assign to an application publisher's certificate for one application or a brand (e.g. Adobe, Microsoft)
- Assign to a digital or software publishers certificate for one application or a brand (e.g. Adobe, Microsoft)
- Assign to the path of an executable program
- Assign to a folder path and apply to all processes run from the path
- Assign to an ActiveX object with a URL

LICENSING

Privilege Authority Professional is licensed per workstation.

KEY FEATURES

CORE PRIVILEGE MANAGEMENT

Includes all the functions IT administrators need to centrally manage Windows clients so that users can run approved operations in Administrator mode. Deploy pre-defined or custom rules to clients through Group Policy.

PRE-DEFINED ELEVATION RULES

Privilege Authority Professional offers access to a set of commonly used rules for a quick deployment and immediate benefits.

CREATE CUSTOM RULES

Includes tools to manage the unique Administrator Rights scenarios in your company. Check for digital or software publisher certificates before elevating rights. Import rules from Privilege Authority Rules Exchange as needed to expand the privilege management capabilities even further.

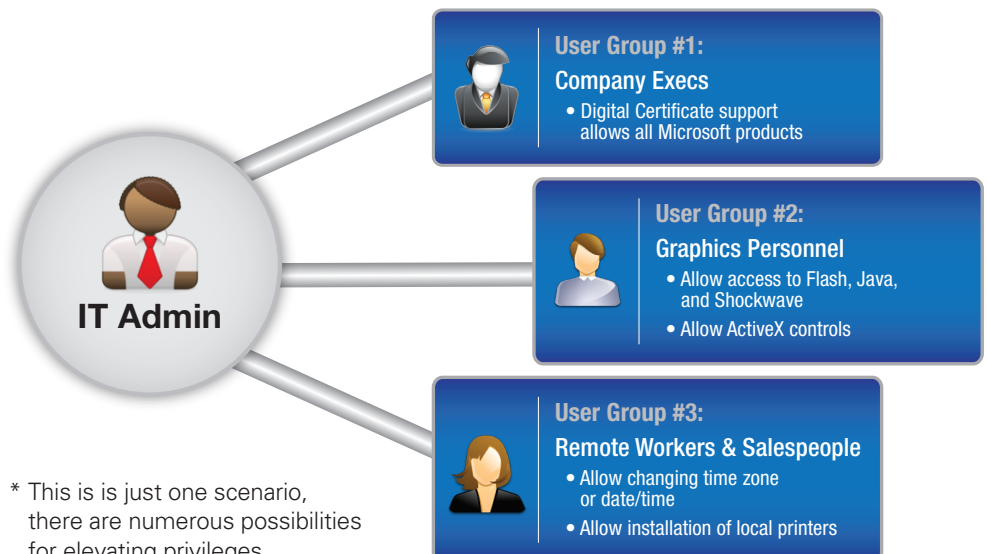

VALIDATION LOGIC TECHNOLOGY

Patented Validation Logic is the targeting engine from ScriptLogic Desktop Authority, integrated into Privilege Authority Professional for quick and granular application of privilege elevation rules.

COMPREHENSIVE REPORTING

With a single click, administrators can report on privilege elevation activities, frequency of privilege usage and elevation policy configurations for all managed clients.

* This is just one scenario, there are numerous possibilities for elevating privileges.
